## **GENERAL SCOPE OF WORK**

The Spokane Street Bridge is a vital link in the area transportation network, providing the only crossing of the Spokane River on the local system. The bridge provides the primary means of residents south of the Spokane River to access the City of Post Falls and Interstate 90.

An incident on the Spokane Street Bridge would require a detour in excess of 10 miles to the west to cross the Spokane River and reach the area served by the bridge. Traffic counts provided for March 2010 showed that the ADT to be 4957. Traffic volumes in summer months have exceeded 10,000 ADT.

The general work will require rehabilitating 900ft bridge deck length and evaluating the bridge current corrosion mitigation cathodic protection system, structural integrity of the piers life cycle and corrosion mitigation measured concepts that can be applied to the bridge. The failing cathodic protection for the bridge will be reviewed and potentially replaced or repaired. Analysis will include options to determine cost effective corrosion mitigation protection for the future on the bridge.

Work and documentation will be per ITD Design Standards, FHWA Emergency Response Manual and the American Association of State Highway and Transportation Officials (AASHTO) standards. Following are the tasks anticipated on this project.

- 1. Concept Report**
- 2. Surveying**
- 3. Approved Material Phase Report**
- 4. Approved Environmental Document**
- 5. Hydraulics**
- 6. Design Approval**
- 7. Final Design**
- 8. Plan, Specifications and Estimate (PS&E)**
