

RP 266 – Evaluation of the Skid Resistance of Pavements at Different Speeds

- Project Description:

The purpose of this project is to examine the feasibility of developing adjustment factors that would enable ITD to utilize skid resistance data collected at speeds other than the limited speed range currently recommended for data collection. The ability to collect and utilize skid resistance data collected at speeds ranging from 20-60 mph could help improve the efficiency and safety of data collection efforts.

- Project Objectives:

The objectives of this project are to:

1. Collect and analyze skid numbers collected at different speeds and compare the results.
2. Develop correlations between skid numbers measured at different speeds to enable ITD to utilize skid numbers collected at speeds ranging from 20-60 mph.

- Estimated Completion Date: June 30, 2019

- Budget: \$119,998

- Project Manager: James Poorbaugh (208) 334-8371 james.poorbaugh@itd.idaho.gov

- Principal Investigators:

Emad Kassem (208) 885-1025 ekassem@uidaho.edu

Richard Nielsen (208) 885-8961 rnielsen@uidaho.edu

- TAC Members:

Chad Clawson (208) 799-4218 chad.clawson@itd.idaho.gov

Trek Pallister (208) 334-8451 trek.pallister@itd.idaho.gov

Jeff Drager (208) 772-1209 jeff.dragerl@itd.idaho.gov

Greydon Wright (208) 234-3317 greydon.wright@itd.idaho.gov

Kevin McGhee (434) 293-1956 kevin.mcghee@vdot.virginia.gov

Brian Schleppi (614) 752-5745 brian.schleppi@dot.ohio.gov
