Increasingly, state departments of transportation (DOTs) are challenged to design and build longer life concrete pavements that result in a higher level of user satisfaction for the public. One of the strategies for achieving longer life pavements is to use innovative materials and construction optimization technologies and practices. In order to foster new technologies and practices, experts from state DOTs, Federal Highway Administration (FHWA), academia and industry must collaborate to identify and examine new concrete pavement research initiatives. The purpose of this pooled fund project is to identify, support, facilitate and fund concrete research and technology transfer initiatives.

Only through the growth of a positive safety culture can significant and sustainable reductions in crash fatalities and serious injuries be achieved. Towards that end, this pooled fund program will:																	
(1) conduct research to identify solutions to specific culture-based traffic safety problems, taking advantage of the implementation opportunities to improve traffic safety;																	
(2) develop resources to enhance understanding and application of traffic safety culture strategies; and																	
(3) provide technology transfer of best practices in traffic safety culture strategies.

This project will fund the continued developments to the Idaho traveler information websites and telephone system. The expected benefits are improvements to highway safety and travel time aided by accurate and timely traveler information provided to the driver. Typical travel event information types are blocked lanes, closed highways, slick roads, high winds, low visibility, and detour routing. The information is available to the public on the internet and telephone.
