Summary

At the Idaho Transportation Department (ITD) our Strategic Plan is “Your Safety, Your Mobility, Your Economic Opportunity.” ITD is committed to providing the safest transportation system possible. Each year progress is made to eliminate death and serious injuries (SI) on Idaho’s highways. Traffic safety professionals have addressed behaviors, infrastructure improvements and enforcement countermeasures to reduce crashes. The goal, “Toward Zero Deaths”, is the foundation upon which we work.

All data and tables are 5 years of data, (2014-2018) except for the Fatalities and Suspected Serious Injuries graphs which are 10 years of annual data (2010-2018). The source of the crash information is the ITD statewide crash database which consists of crash reports completed by all law enforcement agencies in Idaho.

An aggressive driving crash is determined by contributing circumstances when one or more of the following is selected: following too closely, failure to obey stop sign, failure to obey signal, failure to yield, exceeded posted speed limit, speeds too fast for conditions.

Special points of interest:

**Fatalities (2014-2018)**
- 34% of all fatal crashes
- 34% of all fatalities
- 354 fatal crashes
- 389 people killed
- 56% killed were unbelted (passenger vehicles only ages 7 and older)
- 71% crashes on rural roads
- 12% crashes on interstates (rural and urban)
- 39% crashes on US or state highways (rural and urban)
- 50% crashes on local roads (rural and urban)

**Suspected Serious Injuries**

- 46% of all suspected serious injury crashes
- 47% of all suspected serious injuries
- 2,340 suspected serious injury crashes
- 2,996 people suspected seriously injured
- 22% suspected seriously injured were unbelted (passenger vehicles only ages 7 and older)
- 38% crashes on rural roads
- 8% crashes on interstates (rural and urban)
- 33% crashes on US or state highways (rural and urban)
- 59% crashes on local roads (rural and urban)

Top Ten Counties

The graph shows the percent of crashes in the county compared to the percent of licensed drivers in a county.

This graph represents some of the other contributing factors or characteristics in fatal and serious injury aggressive driving crashes.

Involvement by Age

Involvement by gender and age. Involvement is determined by dividing the percentage of the drivers involved in crashes by the percentage of licensed drivers. The expected involvement is 1. A value greater than 1 indicates that the group is over involved in crashes.

Fatal and SI Crashes by Month
