

3.4.1 LOAD FACTORS

- γ_{EQ} shall be assumed as 0.0 for Extreme Event I Load Combination.
- γ_{SE} & γ_{TG} shall be taken as follows:
 - 0.0 for strength and extreme event limit states
 - 1.0 for service limit states if live load is not considered
 - 0.5 for service limit states with live load

Table 3.4.1-4

ITD practice is not to take advantage of the elastic gain, so use $\gamma_{LL} = 0.8$.

Commentary:

Refer to Bridge Design Manual Article 5.9.3, Loss of Prestress, for ITD design procedure.

Revisions:

Oct 2017	Added clarification to table 3.4.1-4 for ITD practice. Added Commentary
