Move Over
The driver of a motor vehicle, upon approaching a stationary vehicle displaying flashing lights or an authorized emergency vehicle displaying flashing lights shall, when safely possible, move into the adjacent lane or, if there is an oncoming lane, move into the oncoming lane while maintaining a safe speed. If the vehicle is unable to move in the adjacent lane or is stopped in the lane the driver shall reduce speed. If there is no adjacent lane, the driver shall slow down the vehicle and maintain a pattern of stop and go, safely pass before resuming normal speed.

No-Zone
The No-Zone is the area around a nest of rails or tubes through which it is likely to be able to see your right side blind spot. If you are stopped and displaying flashing lights, turn your head and eyes and your shoulders a little more to the side while moving down and move over to the adjacent lane, unless a on 2 lane road, your signal must slow down and safely pass beyond normal speed.
