

# PORTHILL Eckhart International SUMMARY REPORT

E

## **Understanding the Airport**

Porthill is a small village on the U.S.-Canadian Border. The town has one of two border crossings between Idaho and Canada. Economic activity in the Kootenay River Valley near Porthill is centered on agriculture and logging. This part of Idaho is known for its lakes, forests, and abundant mineral resources. Large brewing companies, including Coors and Anheuser Bush, have multiple hops farms in the valley. Recreational activities in the area including fishing and boating on the Kootenay River. Eckhart International Airport (1S1) is a state-managed general aviation airport located just south of the border. The airport receives infrequent usage, mostly from recreational aircraft crossing the border from Canada as visitors use the U.S. Customs and Border Patrol station in Porthill. Eckhart International is also used by the brewing companies to conduct crop inspections and by government agencies to perform emergency operations. 1S1 has a significant role in the local economy as it attracts visitors and business to the community, making the airport a critical asset for the Idaho Airport System.

AIRPORT FEATURES					
Associated City	Porthill				
Associated County	Boundary				
Airport Reference Code	A-I				
	ORIENTATION	15 / 33			
Primary Runway	DIMENSION	3,650' x 175'			
	SURFACE TYPE	Turf			

FORECAST SUMMARY							
Activity	2017	2037	% Change				
Based Aircraft	0	0	0%				
CS Annual Operations	N/A	N/A	N/A				
GA Annual Operations	2,080	2,080	0%				

#### **AVIATION FORECAST**

When planning for new or additional airport facilities, projections of various indicators of aviation demand such as based aircraft and operations can help determine the type and size of necessary improvements.

### **AIRPORT ROLES**

Idaho's airport classification structure is designed to establish a network of facilities that support the state's access, mobility, and economic needs while preserving the long-term viability of all airports within the system. The 2020 Idaho Airport System Plan (IASP) Update has identified nine functional roles for the 75 publicly-owned public-use airports in the system. State and federal classifications are the same for airports included in the National Plan of Integrated Airport Systems (NPIAS), while non-NPIAS airports are categorized into three state-specific roles.

1S1

## **Facility and Service Objectives**

Facility and service objectives (FSOs) were developed for each Idaho airport role. These objectives provide guidance on the recommended minimum facilities and services that the airport should have to optimally fulfill its functions in the system. The following table summarizes the airport's current facilities and services, FSOs, other projects recommended or identified during 2020 IASP Update, as well as estimated 20-year development costs. Recommended development costs include projects identified during the system plan, 20-year pavement lifecycle costs, future aircraft storage needs based on forecasted activity, and additional needs identified in the Idaho State Capital Improvement Plan (ISCIP). While these projects are included as part of the IASP, it is recognized that implementation of these projects is dependent on local needs. As an integral component of Idaho's airport system, these recommended improvements will ensure that this facility continues to provide state residents, businesses, and visitors with the aviation infrastructure necessary over the next 20 years.

## **Economic Benefit to Idaho**

The 2020 Idaho Airport Economic Impact Analysis (AEIA) Update quantified the total economic activity of each airport in the Idaho system. The study first calculated the direct economic benefits attributable to on-airport activity, capital improvements, and off-airport visitor spending. Based on these direct impacts, indirect and induced (or "multiplier") effects associated with supplier purchases and the re-spending of worker income were then calculated. Direct impacts and multiplier effects are summed to determine the airport's total economic impacts. Impacts are expressed in terms of jobs, earnings, contribution to the state's Gross Domestic Product (GDP), and total output. GDP is the value contributed to a product or service provided by a firm or group of firms (in this case, airport business). In addition, airports support a variety of other benefits, such as agriculture, wildland firefighting, medical transport, and business operations across the state.

#### **STATEWIDE IMPACTS**

Total Employment	33,460 jobs
Total Earnings	\$1.3 billion
Total GDP	\$2.4 billion
Total Output	\$4.9 billion

Overall, the statewide impact of aviation for Idaho's economy exceeds **\$4.9 billion** and provides benefits through diverse activities associated with aviation and airport activity.

Supports Recreational Flying

ADDITIONAL AVIATION BENEFITS

**Supports Crop Inspections of Nearby Farms** 

Provides Access to Idaho Backcountry and Recreational Opportunities

**Provides Access to U.S. Customs** 

#### LAND USE COMPATIBILITY

Incompatible land use on and around airports can result in noise-related nuisance or safety-related concerns affecting airspace, overflights, and accident severity. Incompatibility has the potential to limit airport operations, close airports, or restrict access. Most recently, Idaho Code 67-6508(q) (Section Q) established new requirements for cities and counties to prepare a Public Airport Facilities section in their comprehensive plans. The Public Airport Facilities section must provide an overview of nearby airport facilities, operations, airport development, and economic impact. Section Q is an important step towards supporting compatible land uses around airports.
