

Study description

ITD is studying U.S. 20/26 (Chinden) between Eagle Road in Boise and I-84 in Caldwell. The study will help ITD identify roadway improvements and determine the need for future right-of-way along this busy corridor.

The study includes an environmental assessment showing how the improvements would affect noise, air quality, cultural resources, and other environmental factors. Once the study is complete, improvements will be planned and programmed as funding becomes available.
